This document contains the necessary specifications to correctly prepare the print files for Cashdisplay products. It is essential to follow these instructions to ensure an optimal result.

Resolution: between 150 and 300 dpi - scale 1:1

File format: PDF, JPG, TIFF

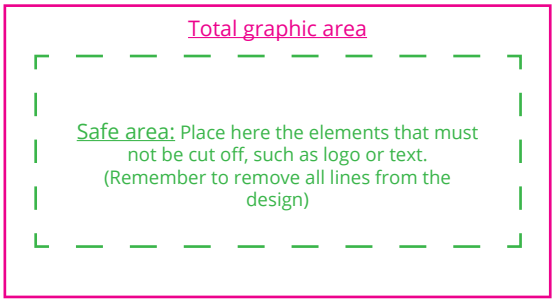

Color mode: CMYK

Flattened file (no layers)
No print marks
No overprint attribute
Do not add bleed (the template already includes it if necessary)
Do not change the size of the template
Convert fonts to curves (create outlines)

Remove the magenta and green lines before saving the files. If they are not removed, they will be printed as part of the design.
For a correct result, all important elements (logos, text, etc.) must be placed within the
safe area, indicated by the green line.
The background and graphic elements must extend to completely cover the design area. The magenta line indicates the final outline of the product, including

Download and work on the design template included on the following page of this PDF.
If there is more than one, prepare the designs in separate files.
